

# TEST EXECUTION REPORT

## Executed By

Bharath Roy

---

## Project Overview

The objective of this test execution was to validate gameplay functionality and identify any gameplay intelligence leaks that could expose answer-related information to players.

Testing was performed using Manual Testing and Exploratory Testing techniques.

---

## Test Environment

### Hardware

- Windows Laptop/Desktop

### Software

- Google Chrome Browser
  - Chrome DevTools
  - Google Maps
- 

## Test Execution Summary

| Metric                    | Count |
|---------------------------|-------|
| Total Test Cases Executed | 25    |
| Passed                    | 24    |
| Failed                    | 1     |
| Blocked                   | 0     |
| Pass Percentage           | 96%   |

---

# Defect Summary

| Bug ID  | Title                                                                   | Severity | Status |
|---------|-------------------------------------------------------------------------|----------|--------|
| BUG-001 | Location Coordinates Exposed Through Client-Accessible Network Response | High     | Open   |

## Test Execution Details

### Functional Testing

All major gameplay functions were validated successfully including:

- Game launch
- Round loading
- Street View navigation
- Guess submission
- Score calculation
- Game completion flow

Result: PASS

### Security / Intelligence Leak Testing

Client-side responses and browser network traffic were analyzed using Chrome DevTools.

During testing, answer-related location coordinates were found exposed through client-accessible network responses.

Result: FAIL

Related Defect:

BUG-001 – Coordinate Exposure Leak

## Evidence Collected

### Screenshots

- Screenshot\_01.png
- Screenshot\_02.png

- Screenshot\_03.png

## Screen Recording

- Screen\_Recording.mp4
- 

## Risks Identified

- Potential cheating opportunity
  - Reduced gameplay fairness
  - Competitive integrity impact
  - Unfair advantage for technical users
- 

## Recommendations

- Avoid exposing exact latitude and longitude values before guess submission.
  - Restrict answer-related information from client-accessible responses.
  - Review API responses for unnecessary data exposure.
- 

## Conclusion

Test execution was completed successfully.

A High Severity gameplay intelligence leak was identified and documented.

The issue has the potential to impact gameplay integrity and should be reviewed to ensure fair gameplay for all users.
