

TEST PLAN

Project Name

Game Intelligence Leak Testing – GeoGuessr

Version

1.0

Prepared By

Bharath Roy

Project Overview

This project focuses on performing manual and exploratory testing on the GeoGuessr web application to identify gameplay intelligence leaks, client-side information exposure, and issues affecting gameplay integrity.

Objectives

- Validate core gameplay functionality.
- Identify client-side exposure of sensitive location information.
- Assess the impact of exposed data on gameplay fairness.
- Document defects and provide recommendations.

Scope

In Scope

- Game launch and accessibility
- Round loading and progression
- Map navigation
- Guess submission functionality
- Score calculation validation
- Network response inspection
- Client-side information exposure analysis
- Exploratory testing using browser developer tools

Out of Scope

- Source code review
- Server-side validation

- Database testing
- Load and performance testing

Test Strategy

The testing approach includes:

Functional Testing

Verification of gameplay features and user interactions.

Exploratory Testing

Investigation of unexpected behaviors and hidden issues through manual exploration.

Gameplay Integrity Testing

Validation that players cannot gain unfair advantages through exposed client-side information.

Network Inspection Testing

Analysis of browser network responses using Chrome DevTools.

Test Environment

Hardware

- Windows Laptop/Desktop

Software

- Google Chrome Browser
- Chrome DevTools
- Google Maps
- Microsoft Excel

Entry Criteria

- GeoGuessr website is accessible.
- Browser is installed and operational.
- Test environment is available.

Exit Criteria

- All planned test cases executed.
- Identified defects documented.
- Evidence collected.

- Test summary report completed.

Deliverables

- Scope Document
- Test Plan
- Functional Test Cases
- Security Test Cases
- Bug Report
- Bug Log
- Test Execution Report
- Test Summary Report
- Evidence Screenshots
- Screen Recording

Risks

- Changes in application behavior may affect reproducibility.
- Some responses may vary depending on game mode or location.

Approval

Testing activities completed and findings documented successfully.
